

Jaehoon Song

402 Suwanee Oaks Dr NE, 30024, Suwanee, GA, USA | ☎ 470-350-8926 | ✉ jsong421@gatech.edu | 🌐 GitHub

Software engineer with production experience across desktop, web, and mobile. Background spans Spring Boot REST APIs, SQL-backed services, CI/CD, and Agile delivery. Seeking full-stack roles to own reliable, data-driven services end to end.

SKILLS

Languages: C, C++, C#, Java, Kotlin, Python, JavaScript, TypeScript, Bash, SQL, *LaTeX*

Backend: Spring Boot (Data JPA, Security, MVC, Testing), FastAPI, Flask, Jakarta EE (Servlets, JSP), Javalin

Frontend: Angular, React, Tailwind CSS, SASS, Bootstrap, Qt, PyQt, JavaFX, OpenGL/Unity

Databases: MySQL, Oracle, SQLite, MS Access, Apache Derby, H2

DevOps: OCI, VMware, Docker, Nginx, GitHub Actions, Jenkins, Gradle/CMake, Maven, uv, Agile/Scrum

Software Engineering: Data Structures & Algorithms, TDD, OOP, Networking, SOAP, RESTful APIs, Multithreading

EDUCATION

Georgia Institute of Technology | Atlanta, GA

Jan 2022 – Dec 2025

Bachelor of Science in Computer Science

GPA: 3.78/4.00

- Recognitions: Dean's List, College of Computing, 2022
- Concentrations: Data Structures & Advanced Algorithms, Discrete Math, Automata, Complexity Theory, Probability, and Statistics
- Tech Stack (UI/UX, Data Analytics, and Mobile Development): Mobile Development (Android, MVVM), Graphics Development (OpenGL and Unity), and Web Development (D3.js)

Gwinnett Technical College | Lawrenceville, GA

Jan 2018 – April 2021

Associate of Applied Science in Computer Programming

GPA: 3.96/4.00

- Recognitions: Java Programmer Certificate, Honors List, and Award of Merit
- Concentrations: System Design, Operating System Concepts, Networking, Concurrency, and Microservice Architecture
- Tech Stack: Java (JSP and Servlets), C/C++, Python, JDBC, and Databases (Oracle, Derby, MS Access)

WORK EXPERIENCE

Revature | Remote

Feb 2026 – May 2026

Back-End Developer (Java Intern, Pre-Employment Program)

- Developed programming skills in Java, SQL, RESTful API construction, and Spring Framework
- Implemented project work including construction of functional REST APIs using Test Driven Development methodologies and applied Java APIs to solve algorithm and problem-set challenges in the project work
- Completed 108 coding activities and showcased understanding of concepts through fourteen (14) evaluations

SK C&C USA | Suwanee, GA

Apr 2021 – Aug 2021

Software Developer

- Contributed to a manufacturing execution system (MES) for SK Global Battery using WinForms (.NET Framework), building operator-facing desktop applications for battery manufacturing workflows
- Implemented TCP/IP networking for PLC integration using SOAP, and maintained VMware virtual machines and Oracle Database operations for data consistency across factory plant systems
- Authored user documentation and operator guides for MES interfaces serving 300+ users

RELEVANT PROJECTS

JS Law Group | Duluth, GA

Oct 2025 – Present

Web Developer (1099 Contractor)

- Built a responsive, multilingual web application on Flask with custom JSON internationalization in JavaScript, dynamic language switcher and wizard components in SCSS and Bootstrap, and server-side validation and CSRF protection using Flask-WTF
- Built CI/CD pipelines with GitHub Actions that deploy to Oracle Cloud Infrastructure through Dokku and Nginx, using an OS-aware application launcher (Gunicorn on Linux, Waitress on Windows)
- Conducted technical feasibility analysis and drafted system documentation for Twilio SMS and Mailchimp REST API integrations to support automated post-submission workflows in future iterations

AlphaVi | Remote

Mar 2025 – Present

Software Developer

- Built a Python integration layer with `requests` that unifies Alpaca broker REST APIs, yfinance market data endpoints, and FTP-backed feeds into one normalized view of account, position, and pricing signals
- Implemented a custom linear regression model and ranking system on historical price and position data to score long and short candidates and guide trade timing and sizing
- Built a scheduler-driven pipeline with APScheduler timed jobs and accounting-based buy/sell rules over normalized broker and market data

PEP RecipeHub | Remote

Apr 2026 – May 2026

Software Developer

- Engineered a full-stack MPA integrating a Vanilla HTML, CSS, and JavaScript frontend with a Javalin REST API backend on an in-memory H2 database
- Implemented token-based session management and authentication with client-side `sessionStorage` and explicit backend CORS policies
- Integrated the Fetch API for async recipe CRUD, pagination, and search filtering; architected Role-Based Access Control (RBAC) middleware for recipe vs. ingredient administration

PEP Social Media Blog API | Remote

Mar 2026 – Apr 2026

Software Developer

Javalin_v1; Spring_v2

- Built a stateless REST backend for user registration, authentication, and message CRUD with Javalin, a 3-layer architecture, JDBC DAO on H2, and Jackson JSON validation
- Refactored the same API to Spring Boot and Spring Web MVC, migrating persistence from JDBC to Spring Data JPA repositories
- Added Spring dependency injection and centralized error handling via `@RestControllerAdvice`, mapping business exceptions to HTTP 400, 401, and 409

Greater Youth Collaborative Opus (GYCO) | Remote

April 2025 – Oct 2025

Web Developer (Contractor)

- Built a complete static website for a 50+ member Korean-American youth orchestra following MVC architecture
- Published on GitHub Pages with Bootstrap-responsive layouts for concert schedules, news articles, and member pages
- Organized HTML templates, SASS stylesheets, and JavaScript page logic so navigation, styling, and article content can be updated independently each season
- Wrote build automation scripts that compile SASS and bundle static assets; designed editor workflow and roster/article templates (Roster of Members)

Grady Health System | Atlanta, GA

Aug 2023 – May 2024

System Architect and Developer (Georgia Tech Capstone Project)

Confidential

- Authored capstone system architecture and design documentation, defining service boundaries for mobile, web, and backend workstreams
- Contributed to web portal and server logic for patient symptom intake and clinician review workflows
- Led the database workstream: built a local in-memory database with socket networking so services exchange patient records and complication flags without shared direct database access
- Contributed to backend analytics that evaluate longitudinal submissions and return clinician alerts; collaborated on mobile UI mockups and Agile review sessions with Dr. Muling Lin (affiliated with Emory College of Medicine)

OTHER EXPERIENCES

Columbia Academy | Duluth, GA

Sep 2024 – Present

Freelance Lecturer (1099 Contractor)

- Instructed mathematics (AP and Georgia Tech Math; 20+ students), physics (10+ students), and computer science (AP CSA and CS principles in Java, Python, and JavaScript; 10+ students) following curriculum standards
- Taught object-oriented programming through UI-based projects to reinforce OOP concepts in CS coursework
- Taught Linux basics and shell scripting for introductory systems and automation on Linux and Windows
- Designed coding challenge problems and implemented unit tests to evaluate algorithmic correctness and programming proficiency
- Developed and released open educational resources for the 2025 SAT Summer bootcamp using customized *LaTeX* environments and commands for professional typesetting

Technologies: Java, Python, JavaScript, JavaFX, Swing, Pygame, Gradle, Linux, Bash, Batch, JUnit, PyTest, Jest, *LaTeX*

Georgia Institute of Technology, School of Physics | Atlanta, GA

Jan 2023 – Dec 2024

Teaching Assistant (TA)

- Operated lab sessions for PHYS 2211 (managed 100+ students) under Emily Alicea-Muñoz
- Assisted students in completing lab assignments and understanding physics concepts including statics, dynamics, thermodynamics, and quantum physics
- Taught students to script and execute computational tools for experimental and theoretical data analysis in lab coursework
- Earned Faculty Honors from School of Physics, 2023

Technologies: VPython, GlowScript, Tracker

Georgia Institute of Technology, School of Computer Science | Atlanta, GA

May 2022 – Dec 2022

Undergraduate Teaching Assistant (UTA)

- Conducted office hours and recitation sessions for CS 2050 (50+ students; discrete mathematics: combinatorics, graph theory, number theory, cryptography) under CoC faculty supervision
- Explained algorithm time complexity during recitation by comparing measured sorting runtimes with Big O analysis using Java microbenchmarks
- Prepared and edited problem sets, solution guides, and recitation handouts, coordinating with instructors

Technologies: Java, JMH, *LaTeX*

LANGUAGES

English (Fluent), Korean (Native), Japanese (Intermediate)
